Cell-by-Cell Analysis

P(above 154.09) @ 1W: 0.535 (raw: 0.520) [3 agents]

Consensus: Agents lean above 0.5 (mean=0.520). USD/JPY remains primarily driven by the US-Japan yield differential: FOMC minutes and ongoing US macro resilience point to a Fed that is reluctant to pivot quickly, which supports higher US yields and a bullish bias for USD/JPY through carry and yield-seeking flows. USD/JPY is trading with a modest USD bias into late February driven primarily by a still-hawkish Fed and lingering rate-differential support for the dollar. USDJPY remains primarily driven by the interest-rate differential between the United States and Japan and by shifts in global risk sentiment.
